## COAP

## Single Solenoid Valve, With manual override, air spring return

Function:

When the coil is energized, the valve shifts its normal position & remains shifted until the coil is de-energized.

## Technical Data:

| РМV-3-1/8-Т                                                    |                                                                                                                                                                                                                                                                                                                 |
